

Annulus convection - transcript

started 2026-09-12T22:24:49+00:00 - no terminator: still running, or interrupted - 3 parts

	step	t/Myr	dt/Myr	AdvectionDiffusion(T)	Stokes(v)	EulerianSUPG(T)
	0	0.175907	0.175907			
	1	0.5015	0.3256			
	12	x12 12.56	↓ 2.704			
rewind 1 (+1)	13	16.8708	4.31057			
	14	446.031	429.161			 abandoned
again	13	16.8708	4.31057			
	14	25.454	8.58321	 	 	 

-  ran; the digit is the order it ran within the step
-  solved, and converged
-  converged, but a fieldsplit block hit its iteration cap - that block did not solve
-  did not converge; the reason is in the record
-  ran in a step that was then abandoned
-  did nothing in this step
-  the steps between did exactly this, unchanged; first and last values are shown where they differ
